EN ISO 20471: 2013 +A1 : 2016			
	Result ▼ Class 2		
Background & Retro-reflective material	Class 2		
Information about classes Class 3: highest level of visibility. Class 2: intermediate visibility level. Class 1: lowest level of visibility.			
Minimum area requirement in m ²	Class 3 garment	Class 2 garment	Class 1 garment
Background material	0.80	0.50	0.14
Retro-reflective material	0.20	0.13	0.10
Combined performance material			0.20
Background fluorescent coloured material, for the day Fluorescence is the ability of a material to reflect more light than it receives. Consequently fluorescent colors seem more vivid than those which does not have this property.			
Retro-reflective material for night A retro-reflector is a device capable of reflecting the light it receives back in directions close to the source. Thus the driver who light a pedestrian in the night with the headlights of his vehicle, can identifies very quickly the garment which features a retro-reflective material.			
The coefficient of retro-reflection of the retro-reflective material must be class 2 to comply with EN ISO 20471 (class 1 of previous EN 471 standard has been cancelled).			
(x) the figure next to the pictogram indicates the category of the garment according to the minimum area requirement in m ² .
